

Overture Management System

Event Module

The Event Module allows a site to transition from a central-pay or pay-on-exit operation to a pre-pay site. Parking operators simply schedule when (time of day, day of week) the transition should take place. At the designated time, the device will automatically switch from standard ticket issuing mode to event mode which will display a fee that must be satisfied before a ticket can be generated. The patron satisfies the fee with a credit card, then the entry device generates a ticket and receipt for the transaction.

		Period	
		From	15:00
		Until	19:00

Time controlled jobs

Transition from exit pay to pre-pay can be automated or enabled at a specific time.

The ticket issued in the entry lane serves as the exit pass for the patron. Based upon the rate schedule, the patron will have a certain length of time to egress freely. If the patron overstays, the exit device will display the additional fee owed to exit the facility.

Device	Status	Ticket	Device
V-2700 CC ENTRY	The Black Eyed Peas	0 3187	V-4700 CC EXIT
