Product: Flat\$15

Device*: V-4700 CC EXIT

Parking fee pushed to exit device

The Remote Fee Management Module enhances customer service capabilities while minimizing staffing. The module allows fees to be pushed to a device when an assistance call is received. If the Overture Management System LPR Module and in-lane devices are utilized at the site, operators can locate entry information and push the actual transaction to the device allowing the fee to be calculated based on actual patron data.
