## The Valet App

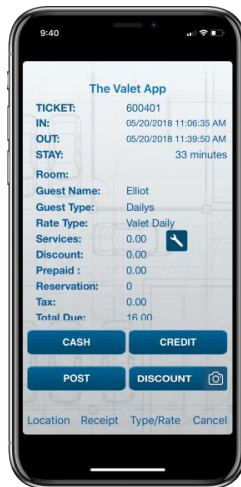

### Full CVPS Functionality

Request the Vehicle

Arrival Screen

Payment Screen

Document Existing Damage

Real-Time Monitors

The Valet App allows complete flexibility for capturing data. Users can input as much, or as little, information as makes operation sense. Important information is delivered directly to the valets, no matter where they are. With The Valet App's system monitors, manager or executives know exactly how many vehicles are in each step of the valet process in real time.

With full Point-of-Sale (POS) functionality, your team can complete transactions when and where needed. POS functionality includes cash, credit card, validations, post-to-room, playcard processing, and email receipts.

### Features

- Optimized for all iOS devices
- Full POS functionality, including email receipts
- Barcode and QR code scan compatible
- Easily set parameters through the CVPS back-office software
- Customizable, permissions-based access
- Photograph vehicle damage to reduce false claims
- Select or scan validations
- VIN scan auto-populates vehicle make, model, color
- OCR technology auto-populates plate number
- Easy scan using mobile camera
