Integrations

Third-Party Aggregators

Give your customers options for parking reservations, coupons, and pre-paid parking. CVPS integrates with several thrid-party aggregators to provide you with cashless options and your customers with an enhanced user experience. CVPS computes and collects for early arrivals and late departures to ensure all revenue is accounted for. In addition to being able to accept coupons, CVPS communicates with the aggregators to verify the validity of coupons.

Integrations are already deployed for ParkMobile, ParkWhiz, and Spot Hero. CVPS operates on an open API and we are able to integrate with other third-party reservation and coupon aggregators as needed.

Features

• Open API for additional integrations
• Cashless transactions
• Pre-paid parking
• Parking reservations
• Enhanced customer experience
