

## eFlexPrint®

## QR Barcode Validation Solution

Increase your customers satisfaction utilizing discounts from Amano McGann's eFlexPrint QR Barcode Validation Solution. eFlexPrint allows parking facility management to set customized validations for system users to print in bulk quantities or instantaneously print for customers as needed.

eFlexPrint integrates with Pro+ Parking Management Software and works in conjunction with Amano McGann's FlexScan QR400® barcode readers. Following fee computation at an Amano McGann payment device, patrons simply scan their validation coupon in the FlexScan reader for the discounted rate to be applied.

The validation process is made easy for parking operators, site employees and patrons through eFlexPrint's multi-tiered, password protected design.

### Features

- Customized validations for multi-tenant/ multi-store facilities
- Single or multi-use validations including settings for validity, start/stop dates and lot number
- Consolidated reporting
- Unique barcoded coupons are stacked and cut individually via the QR barcode printer
- Reverse side of the tickets can be marketed for advertising real estate
- Operators/Tenants have the ability to email a validation to a patron

FlexScan QR400®

## Custom QR Barcode Coupons

FAST AND CONVENIENT, SIMPLE TO USE

### eFlexPrint Process

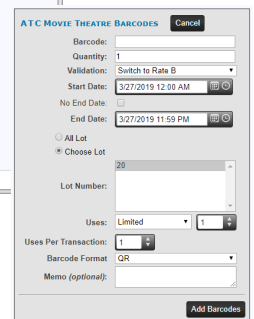

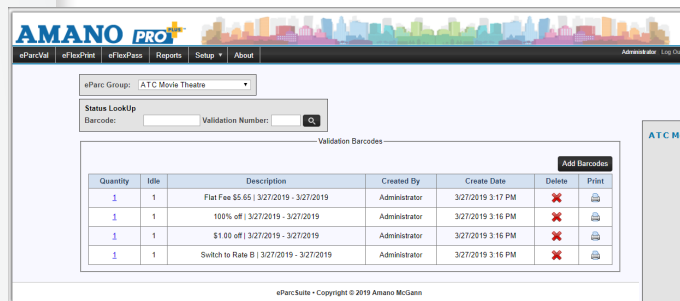

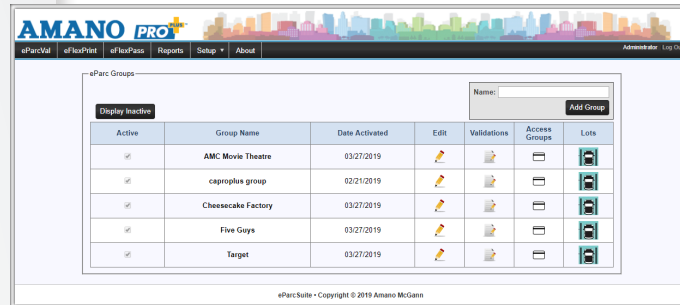

1. The system administrator/facility operator logs into the system to create validations for multiple user groups or tenants whose patrons use the parking facilities. The operator sets the validation value and valid dates and assigns the validations to specific user groups.
2. User groups simply select the desired validation, and unique barcode validation coupons are printed through the system's QR barcode printer in seconds to be distributed to patrons for use in FlexScan QR400 barcode readers.

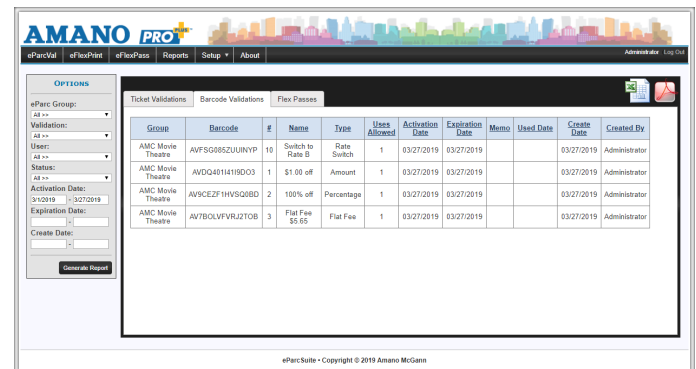

3. Following insertion of an entry ticket for fee calculation patrons scan the validation coupon in the FlexScan QR400 reader at an Amano McGann Central Pay Station, POS Fee Computer, or Exit Terminal to receive discounted parking, pay any remaining balance and depart the parking facility.

### Reporting Capabilities

The eFlexPrint platform automatically tracks validations and has the ability to generate reports to keep operators in the know at all times. The system's reporting capabilities include: active validations, expired validations, validations by user, and validations by option such as start date, end date, created date, group and validation value.

FlexScan QR400®

### Benefits

- Multi-tiered password protected system
- Print bulk or individual validation coupons
- Program multiple validations per user group and reprint unused coupons
- Track multiple user groups through one program
- Enable/disable validations from any location with internet access
- Operators/Tenants have the ability to email a validation to a patron
- All validation coupons are tracked to prevent unauthorized reuse
- Fast, easy validation process improves customer service
